“With Azure Arc, everything is simple. We’ve been able to automate our whole update management system and remove all the dependencies and custom scripts that we built.”

—Björn Beigl, System Engineer – Infrastructure, W&W Informatik, a subsidiary of Wüstenrot & Württembergische

Situation:

The ongoing digitalization of financial services led Wüstenrot & Württembergische (W&W) to seek new ways to optimize its infrastructure as it reached the contract end date for its legacy on-premises IT management software.

Solution:

After learning about Microsoft Azure Arc at Microsoft Ignite, W&W decided to move forward with a hybrid model so that it could tap into cloud benefits like reduced cost and complexity while maintaining control over its on-premises environment and staying compliant with local regulatory requirements.

Impact:

W&W now has more than 2,000 Azure Arc-enabled servers and has reduced the amount of time needed for patching by as much as 35 percent. Its teams have redirected that time to evaluating other Azure resources and cloud workloads and how to use them to add greater value for W&W customers.
